

Next-gen Voice Bot

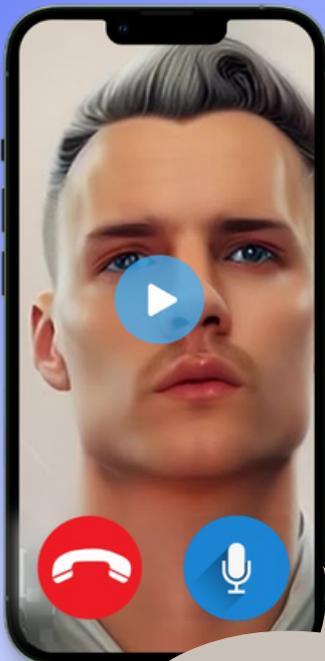

Be on the right side of the change

At a glance

A BPO can leverage AI voice automation to provide 24/7 outbound feedback-collecting bot with deep CRM integration. With our solution, BPO is able to conduct the feedback research without taking the agents off their main occupation. This enables management to take action regarding the findings faster, thus saving the company a lot of future CS headaches. Our tool can use the client's information to deliver a personalized experience for each client that the bot called.

AI Voice Bots Feedback Collection

CHALLENGES

- There are not enough agents to conduct the feedback research without worsening the Service Level.
- Humans are too costly to deliver all calls that should be delivered to impact NPS.

SOLUTIONS

Oxus.AI offers an outbound voice bot as an agent's cost-effective and more efficient substitute. With such a bot all the outbound research calls are taken off the shoulders of the regular employees and put on the bot. That allows for conducting cheaper research without compromising on the quality, as our bot is hardly distinguishable from the real human voice.

RESULTS

- 1 Bot will be set up and demo-calls delivered**
We will set up a bot for your specific task (or set of tasks) based on the scripts you have, knowledge-base and CRM integrations.
- 2 We will find out if we are a fit in 4 weeks.**
Our Pilot is always free. We believe that before taking any money - we need to provide value. It takes around 1 month to build and test an Ai-driven custom voice bot. There are no strings attached
- 3 Increase the speed of calls at least 10X**
Our bot, on average could run 1000-2000 calls per working day, or even more!
